Genus (film) Genus is a docu-drama feature-length documentary film directed by Peter Weibel and Robert Kenner. It documents the quest of a biologist, Dr. Sonja Sperling (Diane Kruger), to unlock the secrets of heredity, a phenomenon that has fascinated humanity for millennia. The journey takes her into the world of multinational corporations, where she falls under the spell of an enigmatic geneticist. Her quest culminates in a confrontation with DNA, a monstrous force that is unleashed on the world, creating untold suffering and needless destruction. Synopsis Genus is a fascinating documentary about the Science of heredity. It takes a look into the dilemma of the discovery of the double-helix DNA that contains the human genetic code. The film follows biologist Dr. Soneja Sperling, who unravels the secret of heredity, and reveals the world-shaking implications of the discovery. The film also looks into the battle to control the world's knowledge and power over heredity and life. Genus takes the audience on a thought-provoking journey into the hidden world of Science, examining the discoveries, the people, the myths and the controversies with cutting-edge scientific research. The film is a rare opportunity to come face-to-face with DNA and explore the potential of heredity and its limitless power to impact mankind and his environment. Genus is a part of an international movement to change the way we are taught about science. It is the first of its kind to take a non-theistic view of the subject and seek to debunk the myths of DNA. It is meant to be a film that explores the different possibilities of where we can get to as a society through science, and unveils the mysteries of human genetics.
