Python package that uses requests to work on IPython Notebook I have been developing a PyPI package that uses requests to interact with REST APIs. I want to make sure that my package works with IPython Notebook before I publish it to PyPI. I have created a test notebook that I hope reflects a scenario that will happen when someone runs a script that accesses the REST API and is published to PyPI, and I am surprised to find that IPython Notebook cannot seem to recognize requests as a package. Requests seems to work fine when I test it using a full-blown Python interpreter, but it does not seem to recognize requests as a module when I try to run it from within a notebook. When I try to import requests from inside the `__main__.py` file (the main entry point to a notebook), I receive an import error. How do I get this to work? Is there any way to write a package that uses requests that will work with IPython Notebook without involving a deployment script and a persistent local repository? A: You need to activate a startup script for IPython, and then use Requests like this:

```
import sys from IPython.utils import start_kernel start_kernel('debug')
from requests import get def using_requests(): resp = get("") print
resp.status_code using_requests() #ifndef GUMBO_TYPE_MAP_H
#define GUMBO_TYPE_MAP_H #include namespace gumbo { /** *
Map a Gumbo type to the type that should be returned from a *
get_raw_token function. ** The Gumbo parser doesn't actually use a
type map, so * the map is simply a way to generate a (larger) type
map from * one for debug purposes. */ class GumboTypeMap {
        648931e174
```

, Java Update sun-java-jre-1.6.0\_16. jdk 8 update 252. The latest release of Oracle JDK is JDK 8 Update 252 and is compatible with Java 6.1u151, (x86). Over the past year, Oracle and its partners have provided several new releases of JDK/JRE . Linux Netinstall for Oracle's Java SE Runtime Environment. A Java Runtime Environment (JRE) is the base runtime environment for Java programs, while a Java SE Runtime Environment (JRE) is the foundation on which Java applications run, as well as a set of tools.
